

What's Bugging You?

An assessment of entomology extension in agriculture in Alberta

Be involved in shaping the direction of entomological extension in Alberta by filling out the following survey. Prompted by recent discussions at **RDAR** (Results Driven Agriculture Research) meetings, this survey is part of an MSc research project in the Faculty of Science at the University of Alberta that will scientifically assess the effectiveness and producer preferences for entomological extension in agriculture in Alberta.

Your responses to this survey will provide producer perspectives on entomological extension in Alberta. A greater understanding of entomological extension in Alberta can serve as a future template for other extension activities in the province.

This survey will take approximately 20 minutes to complete. You can complete the survey by scanning the QR code or pressing the green button below. You can leave out any questions with which you are not comfortable. We appreciate your responses.
